

Eugene Sokolov

New York, NY

+1 347.901.9097 • eugsokolov@gmail.com • eugsokolov.github.io

Product-focused engineering leader with 10+ YoE across full stack, data, and AI systems. Proven track record building and scaling products, technical teams, and infrastructure at startups and high-growth environments. Seeking to drive engineering strategy and technical excellence at an ambitious organization.

Skills

Languages: Python (FastAPI, Flask, pandas), JavaScript/TypeScript (React, Vue, Angular), Flutter

Infra: AWS, GCP, Docker, CI/CD (GitHub Actions, Jenkins), SQL (Postgres, MySQL), NoSQL (Redis, MongoDB, Snowflake)

Design: System architecture, ETL pipelines, data engineering, process automation, API design (REST, RPC, WebSockets)

Leadership: Team building, hiring, mentoring, agile practices, cross-functional collaboration

Experience

Dyle.io *Co-founder and CTO*

June 2024-July 2025

- Built an AI agent to scale account management for SaaS teams using product usage analytics and CRM integrations
- Led product and technical strategy, shipped MVP in 3 months, and drove adoption through 30+ customer interviews
- Owned fundraising narrative and positioned Dyle for GTM with design partners and early investors

Pattern Research *Head of Engineering*

Feb 2022-Oct 2023

- Building an internal crypto trading platform - hiring and leading a tech org of 8 developers, setting culture and team norms
- Designed and guided the build of a full stack application which provides strategy introspection, order entry, and real-time monitoring of trading engines
- Work with traders to lead, plan, and execute engineering and product roadmap. Outcomes include 3x speedup of features released and 5x trader efficiency on trading algorithm design, information retrieval, and order execution
- Created internal data processing pipelines which served a robust backtest and research framework allowing for traders to introspect market data and strategy decisions to create new strategies with ease
- Designed and rebuilt an automated back office and accounting framework, saving thousands of dollars in operational costs
- Built firm wide CI-CD stacks to automate tests, migrations, and code deploys, saving developers countless hours
- Mentored and coached junior engineers, setting plans for technical and non technical improvements

Flatiron Health *Senior Software Engineer*

Aug 2020-Oct 2023

- Collaborated with product and design teams to build a self service oncology research data ETL system, allowing internal non-technical users to build pipelines and deliver data to clients, saving hundreds of thousands of dollars in operational costs
- Led and coached a team of 4 engineers to build new features and follow software engineering best practices
- Built and released numerous features which automate functionality in project pipelines, saving users time spent creating datasets by 10x
- Served as a team architect to set team norms and improve the developer experience, guiding junior developers in code review, design docs, and architectural decisions

Adaptive Management/Knoema *Senior Software Engineer*

May 2019-Aug 2020

- Developed Oasis: a high-throughput ETL system ingesting terabytes of alt data daily
- Optimized ingestion schema, reducing client response time 1000x
- Proposed and spec'd a key visualization feature, increasing revenue by 15% and improving client UX

The Cooper Union for the Advancement of Science and Art *Adjunct Professor (part time)*

Sep 2018-present

- Teaching ECE464 Databases: a graduate-level course on modern database systems: SQL, ORMs, NoSQL, and big data architecture

Hudson River Trading *Software Developer*

Aug 2016-Jan 2019

- Developed ETF automation system managing daily notional flows of \$1-10M; reduced trader ops workload
- Debugged and maintained mission-critical trading infrastructure handling 100M+ daily trades

Education

The Cooper Union for the Advancement of Science and Art New York, NY

- Bachelors (B.Eng.) and Masters of Engineering (M.Eng.), Electrical Engineering **3.5 / 4.0**

Graduated 2016
