

Eugene Sokolov

Engineering Leader | AI & Data Systems | Backend & Full Stack
+1 347.901.9097 • eugsokolov@gmail.com • github.com/eugsokolov

Product-focused engineering leader with 10+ years in fintech, healthtech, and deep tech. Built and shipped across the full stack, from high-frequency trading infrastructure to oncology data pipelines to real-time 3D reconstruction for sports. Track record for building strong teams, shipping products fast, and turning technical complexity into measurable business outcomes.

Skills

Leadership: team building, hiring, mentoring, agile practices, cross-functional collaboration, roadmap planning

Architecture: ETL pipelines, API design, data modeling, AI/LLM integration, distributed systems

Infra: cloud (AWS, GCP), CI/CD (GitHub Actions, Jenkins), Docker, SQL & NoSQL

Languages: Python (FastAPI, Flask, pandas, prefect, celery), JavaScript/TypeScript (React, Vue), Flutter

Experience

impossiblemotion.io | *early stage computer vision startup* | co-founder and CEO 2025-2026

- Co-founded a computer vision startup building real-time and high fidelity 4D viewing experiences for live sports broadcasting
- Designed and built an end-to-end pipeline processing synchronized video from 30-50 camera arrays using Gaussian splatting to generate navigable 3D scene representations
- Developed tooling to align, calibrate, and fuse multi-camera footage into coherent 3D models suitable for real-time rendering
- Produced working demos demonstrating real-time scene navigation, validated core technical approach through conversations with NBA, MLS, and Premier League partners

dyle.io | *early stage AI SaaS startup* | co-founder and CTO 2024-2025

- Architected and led the build of a multi-tenant AI agent platform integrating LLM tooling, CRM APIs, and product usage analytics to automate SaaS account management workflows
- Shipped MVP in 3 months, drove customer discovery through 100+ interviews, translated insights into product decisions
- Owned investor narrative and GTM positioning, engaging design partners and early-stage investors

Pattern Research | *16 person trading firm* | Head of Engineering 2022-2023

- Led a tech org of 8 developers, establishing engineering culture, team norms, and agile practices from the ground up
- Worked with traders to lead, plan, and execute engineering and product roadmap. Outcomes include 3x speedup of features released and 5x trader efficiency on trading algorithm design, information retrieval, and order execution
- Built internal data pipelines powering a backtesting and research framework, enabling traders to introspect market data and rapidly iterate on new strategies
- Redesigned back office and accounting systems, eliminating manual workflows and saving thousands in operational costs
- Established and built firm-wide CI/CD infrastructure, automating testing, migrations, and deployments across the org

Flatiron Health | *established health-tech firm* | Senior Software Engineer & Team Lead 2020-2023

- Collaborated with product and design teams to build a self service oncology data ETL system, allowing internal non-technical users to build pipelines and deliver data to clients, saving hundreds of thousands of dollars in operational costs
- Led and coached a team of 4 engineers to build new features and follow software engineering best practices
- Drove automation across project pipelines, reducing dataset creation time by 10x and freeing engineering capacity for higher-value work
- Served as a team architect to set team norms and improve the developer experience, guiding junior developers in code review, design docs, and architectural decisions

Adaptive Management/Knoema | *early stage data management startup* | Senior Software Engineer 2019-2020

- Developed and supported Oasis: a high-throughput ETL system ingesting daily TBs of "alternative" data
- Optimized ingestion schema, reducing client response time 1000x
- Overhauled PR processes, dev tooling, testing infrastructure, and CI/CD practices, improving developer velocity 5x

The Cooper Union for the Advancement of Science and Art | (part time) Adjunct Professor 2018-2023

- Taught ECE464 Databases: graduate-level course on modern database systems: SQL, NoSQL, ORMs, big data architecture

Hudson River Trading | *established trading firm* | Software Developer 2016-2019

- Created an ETF automation system managing daily notional flows of \$1-10M; reduced trader operational workload
- Decreased corporate action issues 10x by automating procedures and improving override capabilities

Education

The Cooper Union for the Advancement of Science and Art New York, NY

- Bachelors (B.Eng.) and Masters of Engineering (M.Eng.), Electrical Engineering 2016
